People Those Who Followed Our Career Transition Roadmap

TUESDAY NEW

 **AKASH RAJ CHAUHAN** • 11:48 am

Hi akash, I have taken your Data science course few months ago as I wanted to switch my career from core field to analytics field.

Thanks a lot for the course as your course helped me to get a job as a **Data Analyst at Ascent Health**.

I put up the one of the hands on project from your assignment that helps me a lot. Your interview question collection from different different companies helps a lot in covering all types of possible question asked in the interview .

Thanks to you guys and your course.

Hi to all my connections and upcoming connections. People are reaching out to me asking if they can take course from **CloudyML**. I will say YES, the reason behind is they have very good content for beginners as well as for mid level too. I have taken their course for revision purpose but slowly I discovered that it's not only for revision but one can easily use their program to build career out of it. During my time(last year) they also assigned me with two helping hands in case of any concerns or doubts. The guys were easily available on skype between 9 AM till 9 PM (don't know whether they have changed something on it).

So to summarise "yes" any one who wants to build their career into Python, Data science, ML or want to get ready for interviews can surely opt CloudyML and connect with **Akash Raj** for better understanding.

All the best for your future 😊 happy learning.

Akash sir. Your teaching and explanation is awesome. Thanks is just a word, but no words to say about your teaching, supporting, helping and guidance. I recommend to everyone data science enthusiastic. Course fees also very low but teaching and videos are very expensive. You are gave lot of experience to learn lifetime opportunity. No one will give in my experience. At finally I got job as a data analyst in reputed concern. I'm happy to say this. Thank you sir and your team also.

 **Hi Akash,**
Thanks alot for the course. Your course helped me get a job as Senior Business Analyst at Tiger Analytics. Hands-on experience and the efforts to make us understand each and every topic is commendable. Thank you !!!

Some More Course Reviews that You Must Check

3 days ago

Worth it

I have learnt a lot from this course . Too good as per the price . Best part is you will get direct assistance that too daily . You just can't ask more , you will be getting the best from this .

Go for this , without the second thought , You wont regret .

I took Beginner to Advance Combo package and data Visualtion package , Both are worth it .

data science journey with cloudfml

My goal was to do data science. For this, I visit many platforms Coursera, Udemy, and many other places but I didn't find any structural data science course which gives a practice platform along with videos. Then I saw the CloudyML telegram group and their offers. and I enrolled in it. CloudML provides the topics in assignment format. In each assignment, you will get a video as well as a practice dataset where you can apply all concepts. CloudyML is the best platform for those who just want to learn data science from scratch. and I really loved it and thanks to the CloudyML team for providing such insightful courses on their platform.
